Profile

Computer Engineering student at University of Isfahan, passionate about backend development. Experienced with Node.js, Express, NestJS and both SQL and NoSQL. Currently learning microservices. Eager to work in a professional environment, take on challenges, and keep learning new things.

Education

University of Isfahan 2021-2025
Bachelor's Degree in Computer Engineering
Isfahan Province, Isfahan

Skills

Javascript	PostgreSQL	Git	Amazon S3
Typescript	Redis	GitHub Actions	Swagger
Node.js	MongoDB	Docker	HTML/CSS
Express.js	Prisma	Unit/ Integration Testing	EJS
NestJS	TypeORM		GraphQL
	Sequelize		
	Mongoose		
	Elasticsearch		

Projects

HamBaar – Package Delivery Platform
TypeScript, Node.js, NestJS, PostgreSQL, Prisma, Redis, AWS S3, Docker, Jest, Turf.js
More on GitHub Repository and its README

- Developed a scalable package delivery platform matching senders with transporters.
- Designed and implemented a PostgreSQL schema with Prisma.
- Built a multi-stage JWT authentication system with role-based access control (RBAC).
- Integrated Redis for session management, OTP storage, and real-time notifications.
- Implemented dynamic pricing and matching logic with geospatial calculations using Turf.js and Neshan Maps API.
- Utilized AWS S3 with pre-signed URLs for secure document and image uploads.

Bookstore NEST API
TypeScript, NestJS, TypeORM, MySQL, Redis, Cron
More on GitHub Repository and its README

- Designed a normalized database schema to support books, authors, publishers, reviews, tags, collections and …
- Implemented complete filtering and sorting capabilities for all core entities (books, authors, publishers, reviews) with dynamic query building.
- Integrated Redis for caching, cart management, and real-time view tracking.
- View tracking, trending and unique visitor deduplication, and performance caching.
- Developed a review system with reactions and replies.
- Created order lifecycle system with cart management and discount codes.

MenuChi - No-Code Menu Builder
TypeScript, Express.js, Prisma, PostgreSQL, Redis, AWS S3, TSOA, Docker, Vitest
More on GitHub Repository and its README

- Built a no-code platform for restaurant owners to create and manage digital menus.
- Implemented hierarchical structure with restaurant → branch → menu → cylinders for advanced scheduling and categorization.
- Designed scalable PostgreSQL schemas with Prisma for flexible menu workflows.
- Implemented RBAC with session handling using cookies and Redis.
- Used Redis Streams for event-driven communication between services.

Agent-Central Monitoring System (Mini Project)
Node.js, Express.js, Socket.io
Built system to monitor multiple computers from one dashboard.
3 Implementation Methods:

- TCP Socket version for direct agent connection
- Socket.IO version with real-time web interface
- REST API version for HTTP-based monitoring
- All versions support system metrics and alerts
- Multi-room organization for different groups

Divar Clone
Node.js, Express.js, MongoDB, EJS, Swagger
- Designed a MongoDB schema for categories, ads, and user interactions.
- Implemented search and filtering by city, category, and keywords.
- Fronted implemented with template engine (EJS)

Bookstore API (Archived)
JavaScript, Express.js, Sequelize (MySQL), Redis, AJV
A closed project that re-implemented and completed with TS and Nest.

Experiences

Node.js Intern — Robintel June – September 2024

- Worked with Git workflows like feature branching.
- Built a backend project with Express.js using routing, middleware, and RESTful APIs.
- Helped to create app flows and database schemas for new features.
