Profile

Computer Engineering student at University of Isfahan, passionate about backend development. Experienced with Node.js, Express, and both SQL and NoSQL. Currently learning Nest.js and microservices. Eager to work in a professional environment, take on challenges, and keep learning new things.

Education

University of Isfahan 2021-2025
Bachelor's Degree in Computer Engineering
Isfahan Province, Isfahan

Skills

Javascript	SQL	Git	HTML/CSS
Typescript	MySQL	Docker	EJS
Node.js	Redis	Amazon S3	GraphQL
Express.js	MongoDB	Swagger	
	Prisma	Unit Testing	
	Sequelize		
	Elasticsearch		

Experiences

Node.js Intern — Robintel June – September 2024

- Worked with Git workflows like feature branching.
- Built a backend project with Express.js using routing, middleware, and RESTful APIs.
- Helped to create app flows and database schemas for new features.

Projects

MenuChi – No-Code Menu Builder for Restaurants
TypeScript, Express.js, Prisma (PostgreSQL), Redis, Redis Streams, S3, TSOA, Docker, Unit Testing
(Repo is private – Request for access)

- Collaborated in a team to build a no-code platform for restaurant owners to create and manage interactive digital menus.
- Designed scalable PostgreSQL schemas with Prisma for easy feature expansion.
- Wrote type-safe, efficient queries to ensure accurate and safe data access.
- Implemented a RBAC system with session handling via cookies and Redis to protect user access and permissions.
- Used Redis Streams to publish events for scalable service communication.
- Used TSOA for Swagger docs, validation, and explored Nest-like architecture with decorators.
- Wrote unit tests in Vitest, mocking services but using real Prisma queries.
- Wrote Dockerfile and contributed to containerized deployment setup.

Bookstore API
(In Progress)
JavaScript, Express.js, Sequelize (MySQL), Redis, AJV, ElasticSearch

- Analyzed IranKetaab to reverse-engineer and design a normalized and scalable database schema, defining relationships.
- Built an RBAC system with access and refresh token-based authentication using JWT to ensure secure and controlled user access.
- (Soon) Implemented search functionality using ElasticSearch to handle large-scale queries.

Divar Clone
Node.js, Express.js, MongoDB, EJS, Swagger

Network Monitoring Mini Project
Node.js, net, dgram (sockets)

Languages

English	Intermediate
Persian	Native Language

Soft skills

Teamwork
Report writing
Responsibility
Problem solving

Spring 2025
